

ÓBERON AI ECOSYSTEM

Project LUNA

Next-Generation Virtual Reception Assistant: Humanized UX Architecture, Comprehensive Brand Design Strategy, and Enterprise B2B Launch Plan.

01 / STRATEGIC FRAMEWORK

Mission & Alignment

Formulating a high-level UX-driven business framework to optimize security check-ins and customer onboarding across smart offices.

Primary Strategic Objective

Unifying Technical Architecture & Brand Position.

The core objective of Project LUNA is to actively guide the technical development of the AI agent from the Product Marketing department.

This continuous collaboration guarantees visual, interactional, and narrative coherence across the entire Óberon suite. By establishing a robust system of specifications, LUNA prepares the ecosystem for frictionless commercial rollouts in the enterprise B2B sector.

Three-Tier Objective Matrix

01 / STRATEGIC

Brand Alignment

Synchronize LUNA's visual and interactive blueprint with the long-term tech innovation goals of Óberon TSI.

02 / TACTICAL

Visual Prototyping

Produce high-fidelity mockups, interfaces, and holograms to visualize the assistant across desktop and smart environments.

03 / OPERATIVE

Quality Assurance

Verify animation loops, digital facial meshes, and synthetic voices under strict development and business parameters.

02 / CREATIVE CONCEPT & SPECIFICATIONS

The Identity of LUNA

Discovering the visual guidelines, personality traits, and industrial modeling parameters behind a warm and efficient robot helper.

Design Inspirations & DNA

EVE (Wall-E)

Aesthetic Blueprint: Clean, highly sleek, futuristic, aerodynamic, and organic industrial design with zero sharp or threatening edges.

Baymax (Big Hero 6)

Personality Profile: Warm, deeply protective, highly professional, patient, empathetic, and reassuringly intelligent.

Eilik Robot

Expressive Matrix: Highly communicative digital emotions, eye screen changes, and quick responsive facial gestures.

Industrial Design **Details**

Soft Silhouette & Fluid Digital Face

Chassis Geometry: Smoothly organic and compact body. Modeled for a floating stance or a classic mid-shot (waist-up) presentation layout.

Limbs & Base: Aerodynamic integrated arms designed on the same lines of the chassis with a maximum of three functional digits. Legless, hover-style base structure.

Colors & Materials: High-gloss white main chassis accented with deep corporate slate and high-contrast green/cyan detailing.

Naming Matrix & Voice

 **Luna** 

Reflects an elegant, sleek, and timeless astronomical brand positioning. Current project leader.

 **Nova** 

Evokes high-tech innovation, brilliant performance, and next-gen sophistication.

 **Astra** 

Symbolizes advanced galactic exploration and deep cybernetic capabilities.

 **VIA** 

A smart tech acronym representing: **Virtual Intelligent Assistant**.

 **MIA**

Stands for **My Intelligent Assistant**, focusing on personal human connection.

 **Voice**

Natural acoustic output generated by **Azure Custom Neural Voice** systems.

Interactive Animation Poses

Greeting & Welcoming Loop

Active wave gestures coupled with bright eyes to initiate contactless guest onboarding.

Happy / Success Feedback

Upward mouth vector and green glow confirming secure check-in authorization.

Sign-Off & Sleep Mode

Dimmed display lights and slow breath cycles entering energy preservation state.

Thinking & Processing State

Fluid facial graphics displaying circular processing cues during biometric verification.

Sad / Correcting / Error State

Downward curved mouth and orange warning signals to prompt credential re-scans.

Pointing & Guiding Pose

Hand and eye tracking pointing toward physical screens, desk targets, or showroom areas.

03 / IMPLEMENTATION & EVOLUTION

Design Refinement & Budget

Moving from conceptual art to structural digital modeling, and checking the resource allocation for the development cycles.

Iterative Prototype Evolution

Design Element	First Prototype (V1 Baseline)	Second Prototype (V2 Refined)	Strategic Business Value
Arm Assembly	Rounded generic cylinders	Organic streamlined "LUNA" style	Stronger EVE-inspired visual symmetry
Frontal Branding	Empty chassis screen area	"Óberon" logo integration	Fosters brand trust within the TSI ecosystem
Facial Interface	Dual screen elements	Single fluid horizontal line layout	Simpler, warmer, and less cluttered facial interface
Shadows & Colors	Plain white texture shaders	Integrated green/blue blocking	Premium technological shading and high contrast

Phase 1 Capital Allocation

3D Illustration & Animation

\$13,090,000 COP (73%)

Cinema 4D Studio Pro Licence

\$4,800,000 COP (27%)

Total Phase 1 budget consolidated at \$17,890,000 COP. Software licensing and meticulous 3D modeling pipelines drastically decrease technical risks during the B2B launch.

PORTFOLIO CASE STUDY

Explore the Workspace

This project illustrates the intersection of business marketing strategy, meticulous UX character design, and 3D modeling workflow execution.
